The reference values were calculated from analytical data derived from 6 series of 5 repetitions gathered over a 5-month period on a single Rock-Eva®L 7S instrument, using the Bulk Rock method - Total Sulfur cycle.

The confidence interval is expressed as a 95% confidence interval.

\*1 Confidence interval for a single analysis = standard deviation of reproducibility x 2

\*2 Confidence interval for a duplicate = standard deviation of reproducibility x √2

\*3 The MinC value corresponds to organic carbon for this material, which does not contain any carbonates.
