The reference values were calculated from analytical data derived from 6 series of 5 repetitions gathered over a 5-month period on a single Rock-Eval® 7S instrument, using the Kerogen method.

The confidence interval is expressed as a 95% confidence interval.

*1 Confidence interval for a single analysis = standard deviation of reproducibility x 2

*2 Confidence interval for a duplicate = standard deviation of reproducibility x √2

*3 Total C equals TOC since MinC is nul
